

Team Kweli Represents Nuru Trust at DataFest Africa 2025

Nuru Trust Africa was proudly represented at the vibrant Data Fest Africa 2025, hosted at the Aga Khan University in Nairobi on Wednesday, October 15, 2025. Our Team Kweli delegates, Bosibori Omwenga and Yvonne Abungu, joined a dynamic gathering of data scientists, AI strategists, and innovators to explore the continent's data-driven future.

The morning sessions set a powerful tone. A key panel on Community-Centered Data Infrastructure, featuring voices from grassroots organizations, reinforced a central theme: for data to be truly transformative, it must be built by and for local communities, serving people first rather than just corporations or governments.

A critical question woven throughout the event was: What will it take for Africa to shift from a consumer to a producer of AI and data solutions? The consensus from our engagements highlighted key requirements, including investing in local talent, building supportive infrastructure, and developing solutions for unique African challenges.

The event culminated in a Tech Garden exhibition, a dynamic showcase of the practical tools already shaping the continent's landscape, from AI for healthcare to platforms promoting government transparency.

For Team Kweli and Nuru Trust Africa, DataFest Africa 2025 was an inspiring platform for connection and learning. We are more committed than ever to championing community-centered data solutions. Join us in this mission. Explore our work and learn how you can partner with Nuru Trust Africa to help build a more inclusive, innovative, and data-empowered future for the continent.
